VESA and Industry Standards and Guidelines
for Computer Display Monitor Timing (DMT)

Version 1.0, Revision 10
October 29, 2004

This document includes all current VESA Monitor Timing Standards & Guidelines. 'Guidelines' are subjected to the same VESA review and approval process as 'Standards', but are designated as 'Guidelines' to ease concerns on the part of some VESA members that VESA is 'endorsing' these timing standards. 'Guidelines' designations are typically used for lower resolutions or lower refresh rates that are in common industry use in lower-performance systems. For reference, this document also includes a number of <u>industry standard</u> timings (defacto standards) for the computer industry.

This document is the primary means of distribution for all VESA Monitor Timing Standards and Guidelines. The standards and guidelines covered by this document are outlined on the following page.

### 1. Trademarks

All trademarks used in this document are property of their respective owners. VESA is a trademark of the Video Electronics Standards Association.

### 2. Patents

VESA proposal and standards documents are adopted by the Video Electronics Standards Association without regard to whether their adoption may involve patents on articles, materials, or processes. Such adoption does not assume any liability to any patent owner, nor does it assume any obligation whatever to parties adopting the proposal or standards document.

### 3. Support

If you have a product that incorporates any of the standards in this document, you should ask the company that manufactured your product for assistance. If you are a display or controller manufacturer, VESA can assist you with any clarifications you may require. All comments or reported errors should be submitted in writing to VESA using one of the following methods:

FAX: 408-957-9277, Technical Support

Email: support@vesa.org

Mail: Video Electronics Standards Association., 920 Hillview Ct., Suite 140, Milpitas, CA 95035

### 4. Revision History

Version 1.0	Revision 0.0	9/12/94	Initial Release
Version 1.0	Revision 0.1	10/10/94	Fixed sync polarity of 1024x768 at 60 & 70 Hz.
			Removed page numbers so new timings can be added
Version 1.0	Revision 0.2	11/4/94	Added notes & comments to clarify timing of
			interlaced
			modes
Version 1.0	Revision 0.3	2/16/95	Fixed miscellaneous typos
Version 1.0	Revision 0.4	5/4/95	Added EDID IDs for DDC; fixed 1024x768 Interlace
			vertical times
Version 1.0	Revision 0.5	6/14/95	Added BIOS Mode #'s; fixed miscellaneous typos
Version 1.0	Revision 0.6	4/10/96	Added new modes from VDMTPROP V1.0 ŘÔ.6
			passed on 3/96 (85 Hz standards, 1152x864@75,
			1280x960@60)
	Revision 0.6a		Reformatted to Word 6 for electronic distribution
Version 1.0	Revision 0.7	12/18/96	Added new modes from VDMTREV V1.0 R0.8
			passed on 12/96 (1280x1024 @ 60, 1600x1200@60,
			65, 70, 75 and 85)
Version 1.0	Revision 0.8	7/22/98	Added 1792x1344, 1856x1392, & 1920x1440, all at
			60 and 75 Hz. Corrected EDID code for
			1600x1200@85 Hz
Version 1.0	Revision 0.9	8/21/03	Added 848x480@60Hz, CVT 1280x768 timings,
			1360x768@60Hz, CVT 1400x1050 timings, and CVT
			1920x1200 timings based on US & Japan Timing
	<b>5</b>	- /4 4 /0 4	Workgroup requests.
Version 1.0	Revision 1.0	7/14/04	Added CVT 1.30MA (1440 x 900) and CVT 1.76MA
			(1680 x 1050) formats.

```

The vertical refresh rate is defined as the 'Frame' rate where a frame is made up of two fields (odd and even). The blank timing above is defined for the 'odd' field (even field blanking has one additional line). Therefore: Vertical Total = Ver Addr Time + (2 \* Ver Blank Time) + 1

```

The above 1024x768 timing is intended to come as close as possible to 75.000 Hz refresh within the constraints of an integer pixel clock and 8-pixel characters. This timing is already very close to the ideal rate with the integer clock; achieving exactly 75.000 Hz with the same parameters requires a 78.720 MHz pixel clock.

Proposed: 10/31/94 Adopted: 3/1/96

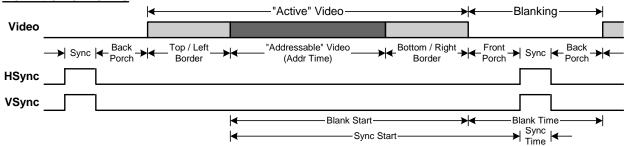

Resolution: 1024 x 768 at 85 Hz (non-interlaced)

```

The above 1280x1024 timing is intended to come as close as possible to 75.000 Hz refresh within the constraints of an integer pixel clock and 8-pixel characters. This timing is already very close to the ideal rate with the integer clock; achieving exactly 75.000 Hz with the same parameters requires a 134.956 MHz pixel clock.

Proposed: 10/10/95 Adopted: 3/1/96

Resolution: 1280 x 1024 at 85 Hz (non-interlaced)

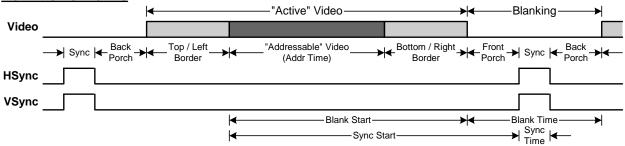

EDID ID: 081h, 099h

BIOS Modes: n/a

Method: \*\*\* NOT CVT COMPLIANT \*\*\*
